

**ABSTRACT OF THE DISCLOSURE**

- 5           A rear view mirror sun visor attachment for attaching to a  
windshield mounted rear view mirror of a vehicle to block sunlight  
shining through between the driver's side sun visor and the  
passenger's side sun visor. The rear view mirror sun visor  
attachment includes a panel having a pair of faces, a pair of  
10 opposite end edges, a pair of side edges extending between the end  
edges. The panel has a slot therethrough between the faces of the  
panel which extends from a first of the side edges of the panel  
towards a second of the side edges of the panel. The side portions  
of the slot each have a flap extending therefrom. The flaps are  
15 coupled together to couple the connect the side portions of the slot  
together.
